

On one side is your complete worship library, on the other is the playlist for your worship service. Click and drag from the library to the playlist and arrange in the order you wish. Nothing could be faster.

See it all... all the time. ProPresenter's Control Screen shows you everything at the same time. Every aspect of the presentation can be affected on this one screen.

Don't be nervous about whether the next slide has the right words... you can see it right in front of you. To display a slide, just click on it. Singing another chorus? Repeating a verse? With ProPresenter, it's no problem.

Want to change your presentation quickly? Hold down the option key on text slides or backgrounds and easily edit, copy, move, or delete.

What are they using to display words for worship?

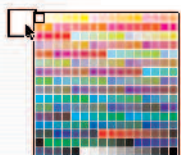

www.ProPresenter.com

Take it with you! ProPresenter runs wonderfully on select notebook computers, which include ports to plug right in to televisions or video projectors.

Change text colors, alignment, fonts, size, and other preferences on-the-fly with the integrated tool bar (the audience will never know you changed it at the last minute).

ProPresenter allows you to sequence your slides to pre-recorded music, allowing a single computer to play back sound tracks to the sound board, and display slides in sequence with just a single button! Now with highlighted words!

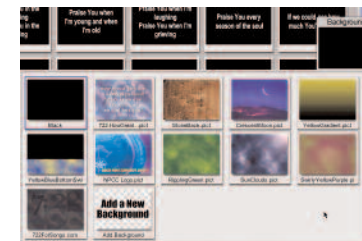

Do you ever have the need to quickly put text or graphics on the screen, but don't want to create a presentation just for one slide? Quick Cues is made just for those nursery calls, car light warnings, and Scripture call-outs you just weren't prepared for. Press a button, type them in, and display them instantly.

Would you like to incorporate video into your worship experience? Don't bother with VCRs and tapes. Display your digital video within ProPresenter.

In ProPresenter, the backgrounds are stored separately from the text so you can dynamically set the mood of a song by changing the graphic displayed.

Add unlimited graphics to ProPresenter and access them instantly within the background panel. To change the background, just point and click. And YES, you can even run video loops as moving backgrounds!
